AARLIN, Metalib & SFX Streamlining information

Tony Davies

1. AARLIN Project

2. AARLIN portal software

3. AARLIN linking software

What is AARLIN?

- Streamline access to information by providing a single easy to use search portal providing access to the complete range of library resources
- AARLIN project has been developed in two stages:
 - 2001 Pilot
 - 2002-04 Implementation
- 21 universities are participating members
- Based at La Trobe University

The need for AARLIN...

- Educational institutions are spending huge amounts on online information resources
- Yet a recent study showed that 45% of students start their research using Google
- Only 10% start with the library catalogue
- Reasons for using Google:
easy to use, always get results

Source: EDNER Issues Paper (8) 2002

-
- A Monash University study showed that users encounter a range of problems using library databases:
 - they have difficulty determining which databases to use
 - they are confused by multiple search interfaces
 - they have problems with multiple sign-ons
 - When deciding which databases to use, the top response from students was “trial and error”

- Monash Library Database Usage Survey, 2001

-
- In 1994 Swinburne had 2 web databases
 - In 2004 Swinburne has over 250 web databases
 - Also dozens of library catalogues, search engines, subject gateways, eprint servers...
 - Dozens of different platforms with different search requirements

Aims of AARLIN...

- “The major aim of AARLIN is to provide users with a resource discovery tool that emulates the ease of use of Internet search engines such as Google, while at the same time guiding them to choosing relevant resources, using a single sign-on.”

- Kate Roberts, AARLIN Project Officer, 2001

Phase 1 – Prototype (2001)

- Major funding from the Australian Research Council
- Demonstration of “proof of concept”
- Selection of Ex Libris software: Metalib & SFX
- 3 month pilot for staff & researchers at 6 universities:

Flinders University

La Trobe University

Murdoch University

Swinburne Univ of Tech

University of Canberra

Victoria University

Phase 2 – Implementation (2002-04)

■ 2002

- Funding from DEST \$2.8 million
- Selected new versions of Metalib & SFX

■ 2003

- Installation, training and rollout at 21 universities

■ 2004

- Go live! Initially to staff and researchers, followed by undergraduates

21 participating universities

Australian Defence Force Academy

Central Queensland University

Charles Darwin University

Edith Cowan University

Flinders University

James Cook University

La Trobe University

Monash University

Murdoch University

RMIT University

Swinburne University of Technology

University of Adelaide

University of Ballarat

University of Canberra

University of Melbourne

University of New England

University of South Australia

University of Southern Queensland

University of Tasmania

University of Wollongong

Victoria University

The AARLIN service model

Locate appropriate resources to search

Search across a range of databases, catalogues, search engines etc. using a standard search interface

View and use results in a standard format

Link from results to full text content and other services such as interlibrary loan where appropriate

Locate appropriate resources to search

Search across a range of databases, catalogues, search engines etc. using a standard search interface

View and use results in a standard format

Link from results to full text content and other services such as interlibrary loan

Locate appropriate resources to search

Search across a range of databases, catalogues, search engines etc. using a common search interface

View and use results in a standard format

Link from results to full text content and other services such as interlibrary loan

The AARLIN search portal

Metalib & AARLIN

- The Metalib software is installed on the AARLIN servers at La Trobe University
- Each institution has its own “instance” of the Metalib software which can be customised
- Each institution’s Metalib only searches that institution’s resources

Resource	◆ PubMed
Title	◆ An Introduction to Spiritual Psychology . Overview of the Literature, East and West.
Author	◆ Miovic, Michael
Citation	Harv Rev Psychiatry 12 2 105-115
YEAR	2004
Abstract	This article outlines the philosophical background to spiritual psychology and selectively reviews Western and Eastern literature on the subject. The world views of theism, atheism, and agnosticism are defined and critiqued, and the boundaries of scientific knowledge discussed. The views of James, Jung, and Freud are reviewed, and the contributions of humanistic psychology noted. Contemporary spiritual psychology is then summarized with reference to recent literature on theistic psychotherapy, Buddhist psychology , mind-body medicine, and transpersonal psychology . Sri Aurobindo's work is introduced as a modern Asian perspective on theistic psychology , and his model of the relationship between the "soul" and the unconscious described. Finally, a brief clinical vignette is given.

BENEFITS FROM PRODUCTIVE AND CONSUMPTIVE ACTIVITIES: RESULTS FROM THE BERLIN AGING STUDY.

Author

Klumb, Petra L.

Add.Author/Editor

Klumb, Petra L.00

Citation

Social Indicators Research Jun2004, Vol. 67 Issue 1/2, p107

YEAR

2004

Abstract

The aim of this study was to assess the subjective instrumentality and immediate process **benefits** afforded by regenerative, **productive**, and consumptive activities and thus to extend the microeconomic perspective on time use. Method: For six consecutive days, 33 women and 48 men aged between 72 and 97 provided signal-contingent self-reports on everyday activities, the reasons for performing them, their contexts and concurrent affect. Results: The dominant reason given for performing **productive** activities reflected Reid's (1934) third-party criterion. With aggregated data, we found consumptive activities to be associated with higher positive affect. This finding was not corroborated on the occasion level, where social context (in company vs. alone) rather than activity type had a reliable effect on positive affect in situ. The main effect was a function of the individual level of neuroticism, and the association between social context and positive affect was a function of the proportion of time spent alone. Results indicated that the level of neuroticism moderates the association between social context and positive affect, but this was not statistically reliable. Conclusion: Being alone or in company makes a difference to positive affect. This may explain the protective effect that social relationships have on

BENEFITS FROM PRODUCTIVE AND CONSUMPTIVE ACTIVITIES: RESULTS FROM THE BERLIN AGING STUDY

ABSTRACT. The aim of this study was to assess the subjective instrumentality and immediate process benefits afforded by regenerative, productive, and consumptive activities and thus to extend the microeconomic perspective on time use. *Method:* For six consecutive days, 33 women and 48 men aged between 72 and 97 provided signal-contingent self-reports on everyday activities, the reasons for performing them, their contexts and concurrent affect. *Results:* The dominant reason given for performing productive activities reflected Reid's (1934) third-party criterion. With aggregated data, we found consumptive activities to be associated with higher positive affect. This finding was not corroborated on the occasion level, where social context (in company vs. alone) rather than activity type had a reliable effect on positive affect in situ. The main effect was a function of the individual level of neuroticism, and the association between social context and positive affect was a function of the proportion of time spent alone. Results indicated that the level of neuroticism moderates the association between social context and positive affect, but this was not statistically reliable. *Conclusion:* Being alone or in company makes a difference to positive affect. This may explain the protective effect that social relationships have on health and well-being. Compared to earlier phases of life, the relationship between personality dispositions and indicators of social relationships may not be as strong in late life.

INTRODUCTION

According to life-cycle theorists, age-related differences in time-use patterns are a consequence of differences in market-earning potential and in the intertemporal choices made by the individual (Heckman, 1976). Although old and very old individuals no longer participate in the labor market, productive and consumptive activities remain central to their daily lives (Herzog et al., 1989). Whether

SFX – Context sensitive linking

Context sensitive linking

- Linking between online resources has been around for a while
- The problem is that a lot of links were duds leading to:
 - pages that had disappeared
 - pages you weren't allowed to access
- What we need are *appropriate* links, links that only appear when they lead to content or a service that is available to the user
- That's what SFX does

How Dogs Navigate to Catch Frisbees

Dennis M. Shaffer¹, Scott M. Krauchunas², Marianna Eddy² and Michael K. McBeath³

Abstract—
Using micro-video cameras attached to the heads of 2 dogs, we examined their optical behavior while catching Frisbees. Our findings reveal that dogs use the same viewer-based navigational heuristics previously found with baseball players (i.e., maintaining the target along a linear optical trajectory, LOT, with optical speed constancy). On trials in which the Frisbee dramatically changed direction, the dog maintained an LOT with speed constancy until it apparently could no longer do so and then simply established a new LOT and optical speed until interception. This work demonstrates the use of simple control mechanisms that utilize invariant geometric properties to accomplish interceptive tasks. It confirms a common interception strategy that extends both across species and to complex target trajectories.

OpenURL model

OpenURL Source
(eg, Metalib)

OpenURL Resolver
(eg, SFX)

OpenURL Target
(eg, online database)

Metalib sends an OpenURL to Swinburne's SFX

SFX checks Swinburne's knowledgebase and presents appropriate services on the SFX menu

Example of an OpenURL

- http://aarlina.lib.latrobe.edu.au:9003/swinburne2?sid=metalib:EBSCO_APH&id=doi:&genre=&isbn=&issn=0956-7976&date=2004&volume=15&issue=7&spage=437&epage=&aulast=Shaffer&aufirst=%20Dennis%20M&auinit=&title=Psychological%20Science&atitle=How%20Dogs%20Navigate%20to%20Catch%20Frisbees%2E&sici=&__service_type=&pid=

Where we are

- La Trobe & Monash have gone live to staff and researchers using Metalib 2
- Swinburne and most other AARLIN sites are waiting for Metalib 3 - due to be installed late July
- Swinburne and 4 other sites will pilot undergraduate student access this year
- AARLIN Project funding ceases at end of 2004
- Business model being developed for 2005...

-
- AARLIN web site
